

Tekton Wall Underlay is non-absorbent, breathable, fire retardant, flexible wall underlay.

Smart enough to shut down water and air infiltration whilst allowing internal moisture vapour the ability to escape, delivering the optimal balance between holdout and breathability.

BENEFITS

- Is breather type coated, spun-bonded polypropylene
- Can be left exposed for 60 days
- Superior water holdout. Taking the industry to a new level for water resistance.
- Optimal surfactant resistance. Wash your building with confidence.
- Fire retardant with the Highest Fire rating of all papers in NZ. It has a 0 rating on the Flammability Index.
- A leader in tear strength
- Suitable for all wind zones including extra high when used with RAB Systems
- Can be used with no internal wall linings, ie: gable ends.
- Increases your building's energy efficiency
- Used for residential and commercial applications
- Will not support the growth of mould
- Contains more than 23% recycled content
- Forms part of the Marshall Weatherization System
